

PROJECT SPOTLIGHT:
THUNDER VISTA P-8 SCHOOL
 BROOMFIELD, CO

Serving up to 1,000 students, this 142,000 square-foot school provides a robust environment for students to learn and grow. Seeking to integrate with the golden colors of the surrounding mountain region, the design team used a corrugated wall profile in conjunction with Steelscape’s Sedona Rust. This printed rust pattern was used rather than using a true weathered product, which would continue to deteriorate in performance—alleviating the headache of ongoing maintenance by school administrators. Sedona Rust provides the same warm, oxidized glow but is supported by the peace of mind of a complete paint warranty.

Architect: Hord Coplan Macht
Builder: Adolfson & Peterson Construction (AP)
